

**MECHANICAL DEVICES  
SPECIAL APPLICATIONS  
MODELS QUICKSTART-AC / QUICKSTART-GC / QUICKSTART-AM**

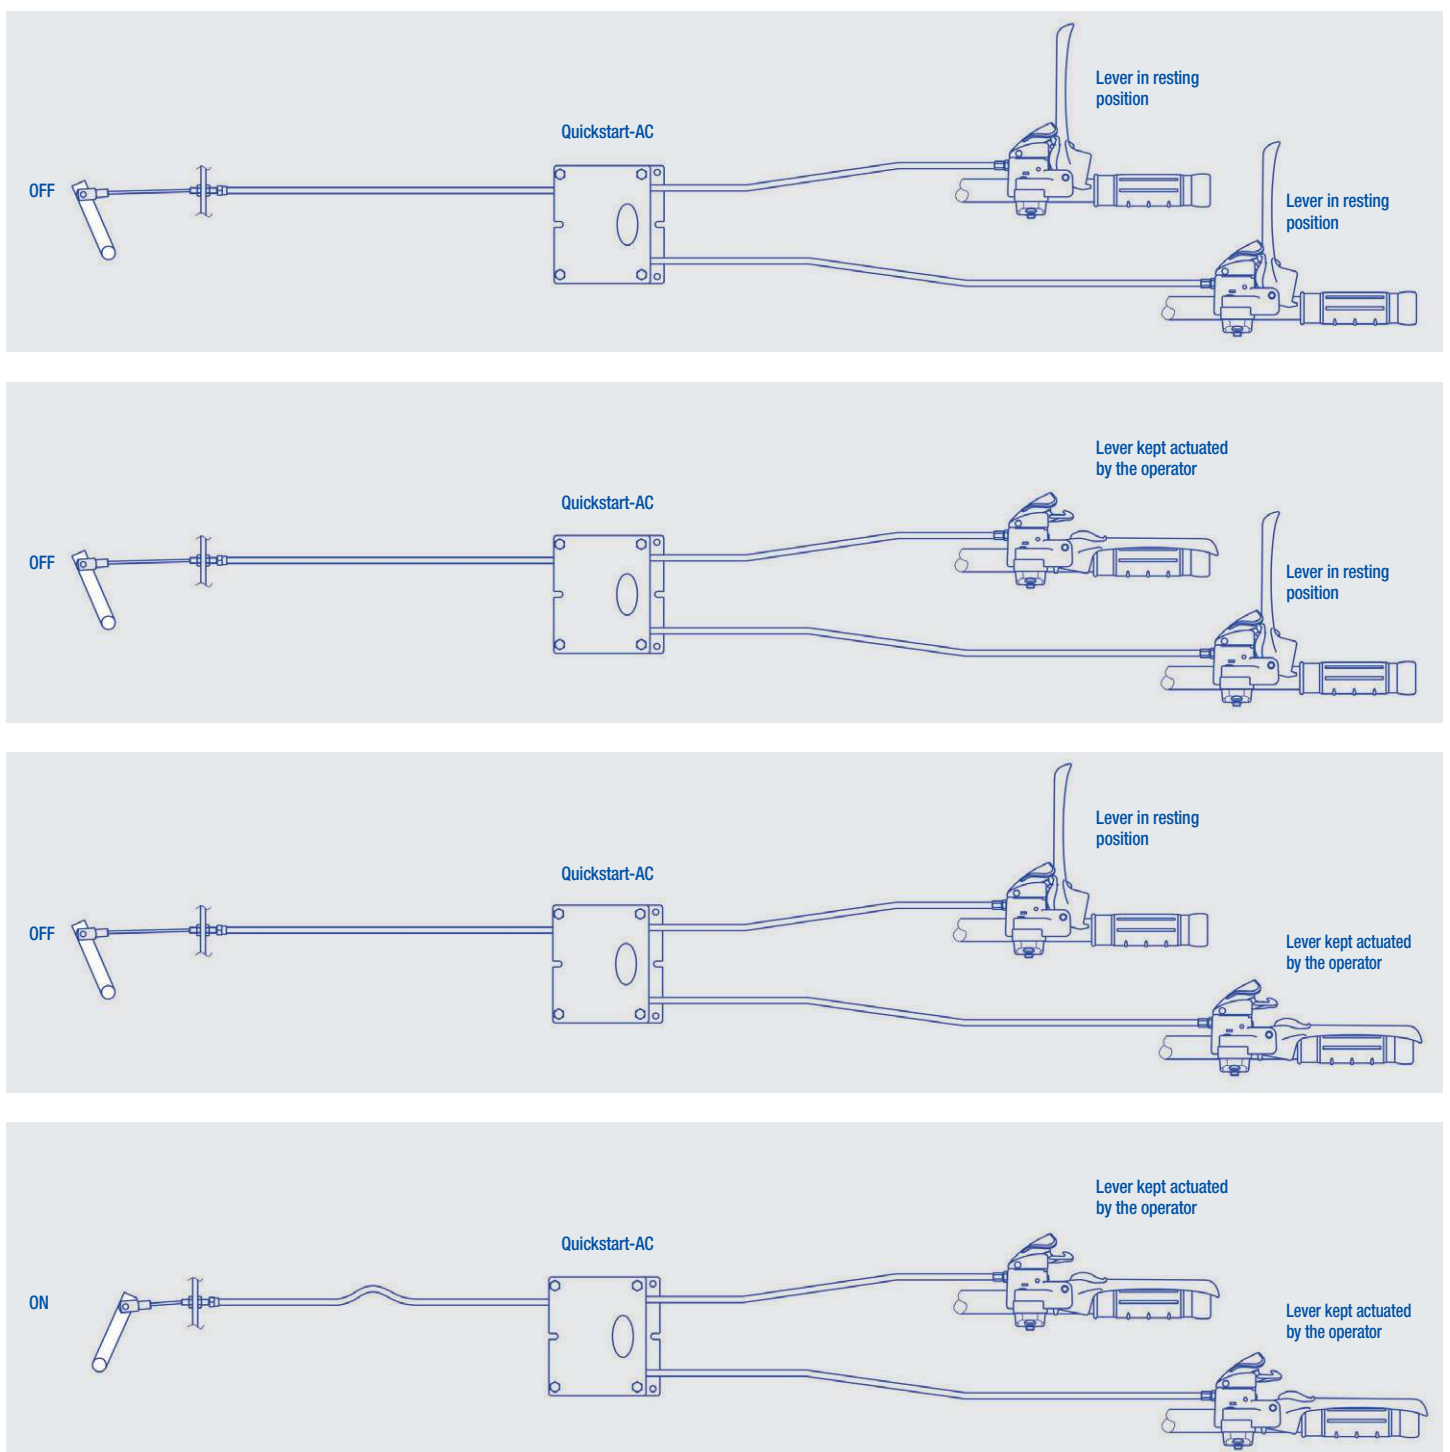

## MECHANICAL DEVICES EXAMPLES OF SPECIAL APPLICATIONS QUICKSTART-AC (Combined Acting)

### Operating:

two controls act on the same application assuring its functioning only if they are operated simultaneously.  
This solution prevents accidental operations, satisfying the safety regulations on the controls with intended action.

### Application example:

control for operating the cutting group

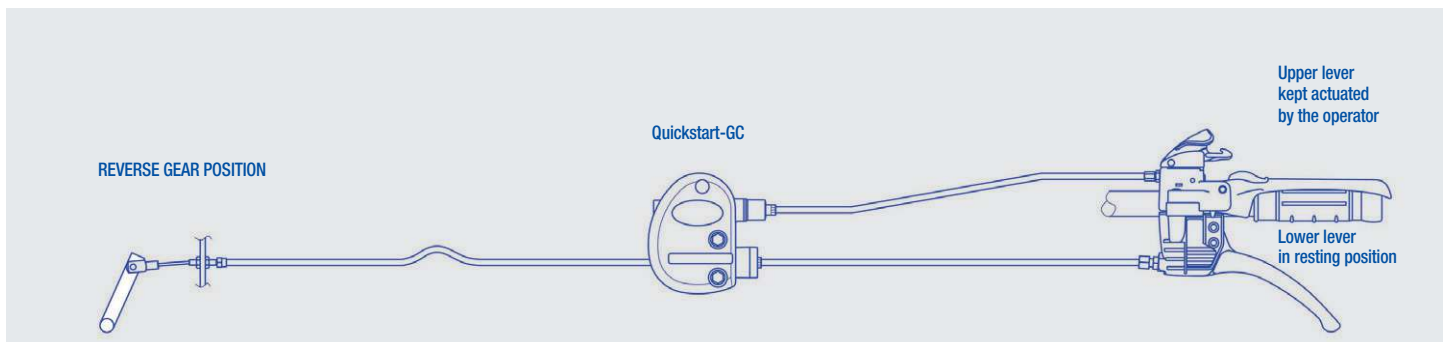

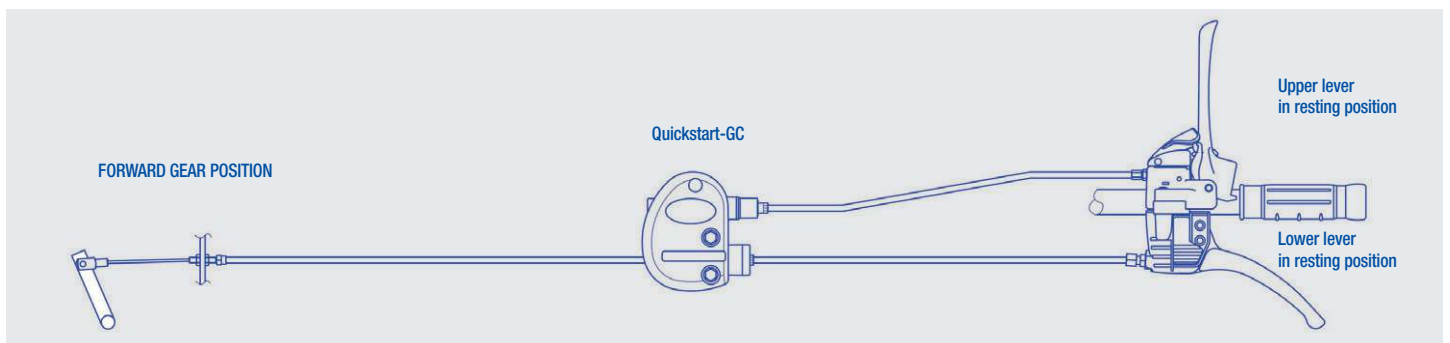

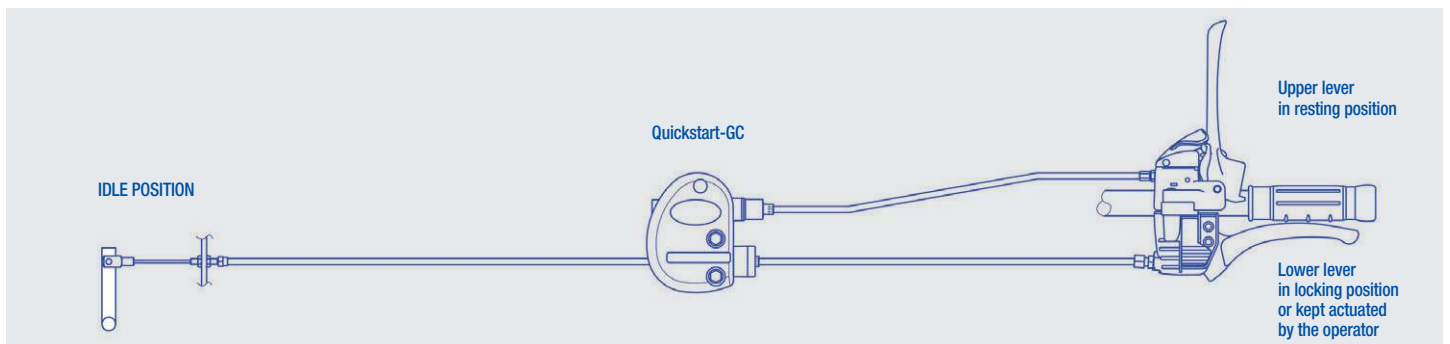

## MECHANICAL DEVICES QUICKSTART - SPECIAL APPLICATIONS QUICKSTART- GC (Combined Management)

### Operating:

two controls act on the same application with different positions

### Application example:

inverter control of a mechanical gearbox

## MECHANICAL DEVICES QUICKSTART - SPECIAL APPLICATIONS QUICKSTART-AM (Multiple Acting)

### Operating:

a single controls actuates two different applications with different strokes

### Application example:

contemporaneous acting of release of a negative brake (stroke 17 mm)  
and tensioning of advance belt (stroke 25 mm)
